Journal of Computational and Graphical Statistics

Dear Dr McCormick,

We have addressed minor issues that the referees have pointed out on our manuscript titled, "A new tidy data structure to support exploration and modeling of temporal data".

The source zip file is attached with this submission, to compile the .pdf of the manuscript. This zip file contains:

1. figure/ Figures generated by R for case studies.
2. img/ Images generated by Sketch to demonstrate conceptual models.
3. references.bib Bibliography items used for BibTeX.
4. tsibble.tex LaTeX source file.
5. tsibble.pdf A duplicate copy of the non-blinded pdf manuscript file.

The supplemental materials contain the R code used for the case studies, available as the scripts zip. We mentioned in the "Acknowledgments" section that all materials contained in the paper can be found at <https://github.com/earowang/paper-tsibble>.

Sincerely
